Key Talking Points & FAQ

This document provides essential messages to help you talk about the Global Governance Frameworks project, along with answers to common questions.

Key Talking Points

- **We are not building a single world government.** Instead, we are creating the open-source infrastructure that allows different governance systems to cooperate and evolve together.
- **This project is a response to the global "polycrisis."** Our current governance models were not designed for today's interconnected challenges, like climate change, pandemics, and information warfare.
- **Our goal is interoperability.** We develop tools, patterns, and frameworks to help diverse systems—from local communities to transnational bodies—share lessons and coordinate effectively.
- **This is a living, collaborative experiment.** The project is a "proof-of-concept" designed to inspire discussion and innovation. Our own governance is an experiment based on principles like Radical Transparency and Subsidiarity.

Frequently Asked Questions (FAQ)

1. Is this a proposal for a world government?

No. In fact, it's the opposite. The project is founded on the **Principle of Subsidiarity**, meaning governance should happen at the lowest effective level. We are not designing a single, top-down solution. Instead, we are building the "scaffolding" and shared protocols that allow many different governance models to coexist and interact productively.

2. Who is behind this project?

The project began as a personal reflection by its founder, Björn Kenneth Holmström. It has since evolved into a collaborative, open-source initiative. The project itself is governed by its own "living constitutional document," the GGF Operating System (GGF-OS), and welcomes contributions from a global community.

3. Why should I trust frameworks co-developed with AI?

Our development process uses AI systems as sophisticated research assistants, not as final authorities. This approach, used for frameworks like the *Treaty for Our Only Home*, allows for "comprehensive research synthesis" and "analytical diversity". Every framework undergoes rigorous human review and refinement to ensure it aligns with the project's ethical principles and is grounded in real-world expertise.

4. Is this project ready to be used now?

The Global Governance Frameworks project is an evolving "proof-of-concept". The maturity of our documentation varies, from high-level concepts to fully developed frameworks. We encourage users to check the status indicator on each document. The primary goal at this stage is to provide tools that inspire discussion, innovation, and adaptation to specific contexts.

5. How can I contribute?

Contributions are welcome in many forms! You can help by:

- **Developing Frameworks:** Assisting with the research and writing of our core governance documents.
- **Translating:** Making the frameworks accessible to non-English-speaking communities.

- **Improving the Website:** Contributing to the development of our SvelteKit-based web platform.
- **Outreach & Community:** Spreading the word, hosting discussions, and helping to build our global community.
